Experience

Rapid Prototyper

Sep 2025 - Currently

Telefónica - Future AI Lab

We explore artificial intelligence through rapid prototyping to test, apply, and transfer emerging technologies into real-world use cases. As the most exploratory team, we operate with a mid- to long-term horizon (2–3 years), identifying and shaping future opportunities. We work across multiple interaction modalities, with a particular focus on voice experiences, using technologies such as JavaScript or Kotlin.

Led end-to-end prototyping on AI-driven human augmentation across wearables (Smart Glasses, smartwatch, connected rings). Shipped 8+ concept prototypes prioritized from 100+ ideation concepts. Designed privacy-preserving data pipelines balancing capabilities with ethical safety. Featured in national media (20 Minutos). Established technical direction for multimodal interaction patterns across research initiatives.

Rapid Prototyper

May 2024 - Sep 2025

Telefónica - Digital Life Disruption Lab

Designed and developed AI-native product prototypes (voice interfaces, smart home interactions) with focus on making users progressively more capable. Led design system adoption across 20-person team, establishing component patterns, token-based theming, and accessibility standards. Reduced duplicated screen documentation by 60%, enabling faster feature delivery and clarity. Established accessibility standards and design-to-code handoff patterns that influenced team practices organization-wide.

UX Engineer Intern

Oct 2023 - Mar 2024

Telefónica - Digital Life Disruption Lab

Designed and developed a text-to-speech prototype for ALS patients using React and voice cloning technologies, with a strong focus on accessibility. Improved the usability of an Android app by adapting layouts across screen sizes and building new features from scratch. Increased user engagement on Movistar Home by designing and developing an interactive voice-based game using React.

UX Designer Intern

Abr 2023 - Oct 2023

Telefónica - People Digitalization

Improved the usability of an internal platform used by 3,000+ employees through user research and prototype testing. Enhanced platform scalability by contributing to the adoption of a design system and migration from PHP to React.

UX UI Designer and Design System

Dec 2020 - Aug 2022

Planout - Startup

During my time at this startup, I collaborated with a team of 7 people to design a native social app (Android | iOS). I worked directly with the CEO in the UX UI design, from ideas to deliverables.

UX Engineer Intern

May 2018 - Aug 2018

Universidad Politécnica de Madrid - Inter

Taking part of an innovation project to redesign some spaces of the Universidad Politécnica de Madrid.

Education

I have a degree in Industrial Design and Product Development from Universidad Politécnica de Madrid (2014–2019) and have expanded my skills through a Graphic Design course at Trazos (Sep 2019 – Aug 2020) and a Frontend Development one (Jun 2022 – Dec 2022). Guided by curiosity, I have developed a multidisciplinary profile that combines design, engineering, and development to create user-focused experiences.

Highlights

10,000+ downloads on Figma Community. Published 8+ technical articles on interaction design and design-to-code workflows. Won Telefónica Equinox 2023 hackathon. Thought leader on responsible AI wearables and human-AI collaboration.

Musician and drummer with live performance experience; recorded a studio album in 2022. This background strengthens creativity, and collaboration in multidisciplinary teams.

Passionate about learning platforms like Lego and Arduino where users can expand their creativity with building blocks.
