Experience

Rapid Prototyper

Sep 2025 - Currently

Telefónica - Future AI Lab

We explore artificial intelligence and rapidly build and develop prototypes to explore, test, apply, and transfer emerging technologies into real use cases. We work with different interaction modalities, with a particular interest in voice experiences, and I use languages such as JavaScript, Kotlin, and Swift, to solve problems, build products and create experiences beyond traditional apps.

Rapid Prototyper

May 2024 - Sep 2025

Telefónica - Digital Life Disruption Lab

I contribute to ideation, design, and development sessions for prototypes within the Discovery area, with a strong focus on Artificial Intelligence, voice features, smart home solutions, and emerging technologies. I have led the introduction of new methodologies to improve communication and ways of working, as well as technical improvements such as the adoption of the design system, covering the full process from design phases through to development.

UX Engineer Intern

Oct 2023 - Mar 2024

Telefónica - Digital Life Disruption Lab

I have designed and developed a text-to-speech prototype for ALS patients using ReactJS and cloned voices, focusing on accessibility and user needs. I also improved the usability of an Android app by adapting the design to different screen sizes and creating new features from scratch. In addition, I boosted user engagement on Movistar Home by designing and developing an interactive game in ReactJS implementing voice and audio functions.

UX Designer

Abr 2023 - Oct 2023

Telefónica - People Digitalization

I improved the usability of an employee support platform used by over 3,000 employees by conducting user interviews and testing prototypes with users. I also improved the scalability of the platform by leading initiatives to adopt a Design System and migrate from PHP to React.

Education

I have a degree in Industrial Design and Product Development from Universidad Politécnica de Madrid (2014–2019) and have expanded my skills through a Graphic Design course at Trazos (Sep 2019 – Aug 2020) and a Frontend Development one (Jun 2022 – Dec 2022). Guided by curiosity, I have developed a multidisciplinary profile that combines design, engineering, and development to create user-focused experiences.

Highlights

I have more than 10,000 downloads on Figma Community and regularly write articles on Medium or Telefónica blog because I love creating educational content and sharing knowledge. I was part of the winning Artificial Intelligence team at Telefónica Equinox 2023 (Hackathon). Beyond design, I have studied music and played various instruments throughout my life; I recorded my first album as a drummer in 2022 and currently perform with several bands, which fuels my creativity and collaborative skills.
